Jennifer / Jim -

I had time to get into the Excel files that Arron assembled arranging the PH data by segment. The attached slide shows average total Aroclor (sum of all Aroclor values flagged as detected) concentrations (Round 2) in sediment by segment. It's very preliminary but I thought I'd pass it by you to see if it makes any sense given your better intuitive knowledge of the Harbor. The big spike in concentration is on the west side between RM 8.2 to 9.4.

Bruce
